

FOR IMMEDIATE RELEASE

SOHware® Selects Intoto Software for Its Next Generation Secure VPN Router for SMB Market

Santa Clara, CA, July 15, 2003 – SOHware® announces the selection of Intoto's high performance software to power the new BroadGuard® Secure VPN Router, as part of SOHware's next generation security solution for small and medium businesses (SMB). The BroadGuard® is based on Intel®'s XScale processor technology, which provides outstanding performance and affordability for secure SMB communications needs.

Intoto is a global leader in security platform software for IP routing, firewall and management integrated with VPN functionality optimized for SOHware's market strategy. These gateway features are bundled with extensive Application level support to enable next generation business services, and are integrated on a highly stable embedded Linux OS utilized in SOHware's BroadGuard® products.

Intoto's security features include business-class high performance VPN termination for secure communications between corporate headquarters and distributed offices. Complete IKE/IPSec functionality includes DES, 3DES and AES with IKE auto-key management to provide powerful encryption and authentication capabilities.

The integrated Firewall and content filtering bring extensive protection to business managers from both inside and outside the network. The Firewall includes a Stateful Packet engine that is ICSA® certified and is coupled with specific Denial of Service blocking for over 50 attack patterns. Application content filtering, event logging

and alerting provide powerful management tools that make the overall security scheme of the BroadGuard® truly comprehensive for SMB.

About Intoto's iGateway™ platform, Ashok Kumar, SOHOware's VP of Marketing and Sales says, "Intoto brings ideal features and performance that enable BroadGuard® to exceed the expectations of SMB business managers." SOHOware is scheduled to release the first generation of BroadGuard® Secure VPN Gateway August 1st this year.

"The BroadGuard® product line from SOHOware is a good example of how Intoto brings its extensive secured gateway software portfolio together to offer complete platform solutions," said Sathyan Iyengar, President & CEO of Intoto Inc., "We are very pleased with SOHOware's decision and we are excited to be part of accelerating SOHOware's next generation product strategy"

About Intoto Inc.

Founded in 1998, Intoto Inc. is a provider of secure embedded gateway infrastructure software to equipment manufacturers and processor vendors in the communications gateway market. Intoto offers iGateway™ product platform, a fully integrated comprehensive embedded gateway software platform. Intoto's licensing-based business model allows equipment manufacturers to create and rapidly deploy fully validated, reliable gateway equipment. www.intotoinc.com.
