

SOHware Introduces AeroHotSpot™ WLH3000 Wireless Hotspot Gateway

*An All-in-One Hotspot Solution for Cafes, Hotels and Business Lobbies
Supporting Up to 50 Simultaneous Users*

Santa Clara, CA, January 19, 2006 – SOHware, an integrated wireless systems pioneer, introduces the AeroHotSpot™ WLH3000, the next generation of SOHware's ongoing commitment to enabling guest Internet access for SMB networks. The WLH3000 is a fully integrated solution that can stand alone as the network gateway for a small business, or provide guest access control for conference or lobby areas in a larger network.

WLH3000 is ideal for VARs and small to mid size Service Providers who benefit from a highly reliable platform that is simple to install, yet provides exceptional features for a wide range of network applications. Built on Intel XScale technology, the WLH3000 has improved processing performance for better throughput. Simultaneous user capacity is rated at up to 50 users. The plenum ready gateway is specifically designed for business use with improved heat management for a longer installed life cycle.

"I'm impressed with the overall performance of the WLH3000. Capacity works as advertised, which is far better than other hotspot gateways I've tested," says Wil McLean of Axxcess International, a SOHware Hospitality VAR. Wil states further, "Most small business gateways add 20 to 30% overhead that guests really notice when browsing the Internet. The WLH3000 has no noticeable impact, and it has a very straightforward configuration... an excellent value for my business."

Hotspot features for the WLH3000 include a local user authentication database for up to 2000 on-demand accounts with the option to select from up to 10 billing profiles when provisioning users. Optional remote RADIUS support is available for Service Provider or Enterprise network authentication. For administrators, control over session use is available by accrued time or bandwidth, while detailed log reporting is available on each account. The venue or Service Provider can provide a fully branded user experience with the graphically customizable login screen.

The WLH3000 is an all-in-one wireless gateway, with fully integrated 11b/g access point for client access. Networking features include built-in multiple subnets that provide flexibility in supporting various

network applications, including separated public and private networks that allow the WLH3000 to stand alone as the central gateway supporting both guest and administrative users. To complete the gateway functions, WLH3000 provides full routing and firewall with smart NAT features that support VPN and Email applications. The integrated design makes the WLH3000 more justifiable for cafes, restaurants and smaller hotels to implement Internet services.

About SOHware

SOHware provides AeroHotSpot™ and other integrated networking solutions that conform to OACIS™ open architecture through a Partner-Direct channel model for SMB, hospitality and MTU properties. SOHware solutions offer innovative, business-class features combining performance, ease of use, and affordability demanded by the growing SMB and Small/Medium Service Provider (SMSP) markets.
