

Sohware and Ortega InfoSystems Partner to Offer Integrated Wireless Video Surveillance

Extends Value of Sohware's Outdoor AeroMesh in Municipal Public Safety and Corporate Security Applications

Santa Clara, CA, August 25, 2006 – Sohware, a pioneer in Wireless LAN technology and an emerging leader in integrated networking, announces a joint partnership with Ortega InfoSystems, a leader in software for Web-enabled IP Video, to offer wireless Mesh enabled video surveillance solutions to municipal and corporate security markets. The partnership combines technology leadership that creates exceptional value for VARs and Service Providers whose customers seek a turnkey solution for premier surveillance monitoring and facility control.

Sohware's AeroMesh, a highly innovative Layer 3 Mesh routing system, will be launched in September 2006, and the integration of Ortega's software technology highlights the commitment Sohware is making to further solidify the value proposition of AeroMesh to its channel Partners. "Today's wireless Mesh must excel at the integration of both voice and video support. Partnering with Ortega insures AeroMesh to be a very compelling solution right from the start," says Mike Mo, VP of Engineering for Sohware.

Ortega InfoSystems specializes in IP video management, simplifying the monitoring and management of the surveillance system from anywhere the Web is accessible. Their VideoSmart application can integrate digital and analog CCTV, NVR, and DVR camera technologies with emphasis on intuitive Web operation. Sohware has certified Ortega's VideoSmart to be fully interoperable with its AeroMesh Outdoor wireless Mesh solution, allowing real time remote monitoring from a fixed or mobile Client location. AeroMesh consists of advanced Layer 3 routing combined with patented Adaptive Wave Routing, a protocol that supports faster handoffs across multiple subnets for seamless voice and video roaming support. As a result, municipal law enforcement agencies can realize true mobile VoWiFi and video surveillance monitoring anywhere in the Mesh deployment zone.

About Sohware

Sohware provides integrated networking solutions that conform to OACIS open architecture through a Partner-Centric channel model for SMB, hospitality, MTU/MDU property, and campus networks.

Sohoware solutions offer innovative, business-class features combining the performance, ease of use, and affordability demanded by the growing SMB and Small to Medium Service Provider (SMSP) markets.

OACIS portfolio solutions include:

- AeroGuard MIMO access points
- AeroMesh indoor / outdoor Wireless Mesh
- AeroGate subscriber management appliances
- AeroExtend outdoor PMP wireless
- BroadScan UTM security appliances
- BroadTaIX VoIP PBX appliance

About Ortega

Ortega InfoSystems Inc. is the leading software developer for Web-enabled IP Video, facility control, and physical security management. Ortega InfoSystems's core competencies come from years of engineering experience developing factory and building control systems for Silicon Valley customers such as Applied Materials, Hewlett Packard, and Sun Microsystems.
