

SOHOWARE Standardizes GigE Interfaces on all its Open Source UTM Appliances

Open Source Security Appliance offers Greater Value to SMB and Smaller ISPs Globally

Santa Clara, CA. September 20, 2007 – [SOHOWARE, Inc.](#), a Wireless LAN pioneer and a key vendor of Business Wireless Networking recognized by prestigious WLAN market research firms such as, In-stat and Infotech, announced that it is standardizing GigE Interfaces on all of its [BroadScan](#)[™] Open Source unified threat management (UTM) appliances.

“Our customers ask for BroadScan because it offers unprecedented performance

and value without the burdensome yearly subscription charges. Now with GigE interfaces without any significant price increase, it is even a greater value,” says Tal Rudnitsky, CTO of IPGrade, a long time SOHOWARE Channel Partner. He adds,

“Cost effective and sensible enhancements like these help us increase our revenue as well as attract new business.”

An early champion of the Open Source networking, SOHOWARE introduced BroadScan [all-in-one network security appliance](#) 2 years ago based on the leading Open Source software engines ClamAV, SpamAssassin and SNORT. The email scanning is optimized for accuracy with Heuristic analysis and Bayesian self-training functions for inbound and outbound traffic. An intuitive wizard enables graphic charting of network performance and event statistics by time, history and event types.

“We continue to improve customer value through cost effective performance enhancements in all our network solutions as dictated by our Six Sigma Business Model

Innovation process,” says Ashok Kumar, SOHOWARE’s Chief Marketing Officer and Vice President of Business Development.

The new BroadScan™ Open Source Internet security appliances with GigE interfaces include 200-user SCL1200G, and the 1000-user SCL3000A. These models have integrated WAN Load Balancers, and provide VPN, RADIUS, IDS, SPI Firewall, QoS, and VoIP and SSL Support.

For a limited time these all-in-one security appliances are available at up to 50% discount for selected resellers. To learn more or to qualify, contact our [VAR Channel Manager](#).

About SOHOWARE

SOHOWARE provides easy to use, high performance and affordable wired and wireless networking solutions through a Partner-Centric Direct channel for business, institution and vertical application customers including, Hospitals, MTU/MDU, Hospitality and multi building campuses. The solutions include:

- AeroMesh Indoor Outdoor [Wireless Mesh](#) Network for Converged Services
- AeroGuard [MIMO WLAN Wireless Switch](#) and AP
- AeroExtend Outdoor [Wireless Bridge and AP](#)
- AeroGate Open Source [Hot Spot Subscriber Management](#) Appliances
- BroadScan Open Source UTM [Security Appliances](#)
